Farm Disposition Reports for Other Commodities, 1953-54

First in the series of farm disposition reports for 1953 and 1954 crops was the report for fruits and tree nuts published in January 1955. Estimates for cotton and cottonseed will appear in the Cotton Report of May 9, 1955; estimates for tobacco will appear in the May 10, 1955 issue of Crop Production; estimates for sugar beets and sugarcane are scheduled for the June 10, 1955 issue of Crop Production. A report covering disposition of turkeys was issued in March 1955; separate reports for chickens and eggs, for milk, and for meat animals appeared in April 1955.

The farm disposition and value data shown in this report are for the marketing season or crop year. The value estimates shown should not be confused with cash receipts which relate to the calendar year irrespective of the year of production.

FIELD AND SEED CROPS

Farm Production, Farm Disposition, and Value, by States, 1953-54

Estimated farm disposition of grains, hay, certain seeds, potatoes and a few other commodities are presented in this report, which is one of a series dealing with farm disposition of major farm products. Total estimated production of each commodity is that published in the December 1954 Annual Summary of Crop Production. Estimated sales from 1953 and 1954 crops and portions of production used or to be used for designated purposes on farms where grown are shown in this report.

Quantities shown as fed to livestock and poultry represent that portion of the crop fed only on the farms that produced it; they are not the quantities ultimately used for livestock feeding. Grain purchased for feed and seed does not enter into these feed grain estimates. Some of the products shown as "sold" from farms are used for feed and seed on other farms in the same or other States. For corn, the quantity sold pertains only to grain corn; the quantity fed includes not only the grain corn fed, but also that portion of all corn production representing the grain equivalent of corn used as silage and forage.

Quantities of principal feed crops sold and used in farm households, if any, are estimated directly and the residual--production less household use and sales--is shown as used for feed and seed. For certain commodities, of which there is virtually no farm use, the entire production is shown as sales. Sales of some commodities are estimated directly from the analysis of surveys in which farmers report production and sales. For others, special disposition inquiries are made in which farmers report their production of each commodity and the quantities used on their farms for each purpose. Whenever possible, sales have been checked by enumerations, such as reports of processors, or by records of handlings and shipments by rail, truck and boat. For certain crops total seed requirements are shown, and for some a further breakdown is made to show home grown seed. The difference between total seed and home grown seed would thus represent purchased seed, which is included in the quantity sold.

Season average prices are, in most cases, the estimated mid-month prices received by farmers, weighted by estimated percentages sold in each month of the crop marketing season. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, and most seeds are based primarily upon special survey data. For sugarcane sirup (except Louisiana), sorghum sirup, and velvetbeans the prices are those reported on December 1 of each year. Price estimating procedure makes allowance for loans unredeemed at the end of the crop marketing season and for quantities bought by the Government under purchase agreements when such transactions are of significant volume.

The season average prices for quantities sold are also used to evaluate total quantities produced, and quantities used on farms. Value of sales is thus the unit price applied to quantity sold during the marketing year. In like manner value of production and of home consumption are computed by applying the season average price to the quantity produced or used.

The marketing season for each crop, and a bibliography of other farm disposition reports for 1953 and 1954 crops, are shown on pages 39 and 40.

1/ Ground at the mill for home use or exchanged for flour.

2/ Includes an allowance for unredeemed loan and purchase agreement deliveries valued at the average loan rate per bushel, by States.

3/ Value of Winter Wheat plus Spring Wheat; season average prices are derived.

4/ State prices weighted by quantity sold. State prices weighted by production results in the same U.S. average price.

Table 4.--WHEAT: Production, farm disposition, and value, by States, 1954 crop 1/

State	Production	Total used for seed	Farm disposition				Season av. price per bu. rec'd by far- mers 3/	Value of production	Value of farm house- hold use	Value of sales
			Used on farms where grown			Sold				
			For seed	Fed to live- stock	For farm house- hold use 2/

1/ Preliminary.

2/ Includes seed purchased and seed used on farms where grown.

3/ Consists of potatoes sold for all purposes including food, seed, processing and livestock feed.

4/ Includes the following quantities of commercial early potatoes not marketed (1,000 bushels): 1954 - New Jersey, 4.

5/ State prices weighted by quantity sold. State prices weighted by production results in the same U. S. average price.
